Esports Tournament Platform

Product Type Esports Platform	Supported Games Valorant, BGMI, CS2	Platform Responsive Web	Budget Tier \$150–200
----------------------------------	---	----------------------------	--------------------------

Field	Value
Product Name	Nexus Arena 2026
Product Type	Esports Tournament Platform
Supported Games	Valorant, BGMI, Counter-Strike 2
Target Users	Players, Teams, Tournament Organizers
Platform	Responsive Web Application
Budget Tier	\$150–200

1. Project Overview

Nexus Arena 2026 is a web-based esports tournament platform designed to streamline tournament participation and management for competitive gaming communities.

The platform will provide tournament discovery, team registration, player profiles, match tracking, and leaderboard management within a single application. Tournament administrators will have access to management tools for creating events, managing participants, and updating results.

The platform should deliver a modern esports-focused experience across desktop and mobile devices.

2. Business Goals

The platform aims to:

- Simplify tournament registration and participation.
- Provide centralized tournament management.
- Improve visibility of player and team performance.
- Support competitive communities for multiple esports titles.
- Enable organizers to manage tournaments efficiently.

3. Target Users

Players

- Create accounts and profiles.
- Join or create teams.
- Register for tournaments.
- View match schedules and rankings.

Team Captains

- Manage team information.
- Register teams for tournaments.
- Monitor team performance.

Administrators

- Create and manage tournaments.
- Approve registrations.
- Manage users and announcements.
- Update match results and leaderboards.

4. Core Features

Authentication

- User registration and login.
- Password reset functionality.
- Secure account access.

User Profiles

- Player profile management.
- Tournament participation history.
- Match statistics and team affiliation.

Tournament Management

- Tournament listings.
- Tournament detail pages.
- Team registration workflows.
- Tournament schedules and brackets.

Team Management

- Team creation and editing.
- Team membership management.
- Tournament enrollment.

Leaderboards

Separate leaderboards for:

- Valorant
- BGMI
- Counter-Strike 2

Administration

- Tournament creation and updates.
- User management.
- Match result management.
- Announcement publishing.

5. User Experience Requirements

The platform must use a modern esports-inspired interface.

Visual Style

	Primary Color #7C3AED
	Secondary Color #1E293B
	Accent Color #22C55E

Responsive Design

Support:

- Desktop

- Laptop
- Tablet
- Mobile

Users must be able to access all primary functionality on supported devices.

6. Technical Requirements

- Responsive web application.
- Optimized image loading.
- Homepage load time within three seconds under normal conditions.
- Consistent navigation across all pages.
- Secure access to administrative features.

7. Deliverables

The final submission must include:

- Complete website source code.
- Database schema.
- README documentation.
- Responsive user interface assets.
- Sample tournament data.
- Sample leaderboard data.

8. Scope Boundaries

Included	Excluded
• Authentication system • Tournament management • Team management • Leaderboards • User profiles • Administrative dashboard	• Payment gateways • Betting systems • Cryptocurrency functionality • Native mobile applications

9. Success Metrics

The project will be considered successful if:

- Users can register and log in successfully.
- Teams can be created and managed.

- Tournament registration functions correctly.
- Match results update leaderboard rankings.
- Administrative functions are restricted to authorized users.
- The platform remains responsive across supported devices.

10. Acceptance Criteria

- All required pages are implemented.
- Authentication functions correctly.
- Team registration and management work successfully.
- Tournament workflows operate without errors.
- Separate leaderboards exist for all supported games.
- Administrative controls are protected.
- Responsive layouts function on desktop, tablet, and mobile devices.
- All required deliverables are included.
